4.2.2. Best Selling Product

02:56

Write a Python program that takes the file name of a CSV file as input, reads the data, and performs the following operations:

- The CSV file contains the columns: `Date`, `Product`, `Quantity`, `Price`, and `City`.
- Find the product that sold the most in terms of quantity sold.
- Display the product that sold the most and the total quantity sold for that product.

Sample Data:

```
Date,Product,Quantity,Price,City
2025-01-01,Product A,5,20,New York
2025-01-01,Product B,3,15,Los Angeles
2025-01-02,Product A,7,20,New York
2025-01-02,Product C,4,30,Chicago
2025-01-03,Product B,2,15,Chicago
2025-01-03,Product A,8,20,Los Angeles
2025-01-04,Product C,6,30,New York
2025-01-04,Product B,5,15,Los Angeles
2025-01-05,Product A,3,20,Chicago
2025-01-05,Product C,10,30,Los Angeles
```

Note:

The data cannot be displayed in the file. You can refer to the sample data provided for insights.

Code:

```
import pandas as pd

# Prompt the user for the file name

file_name = input()

# Load the data

df = pd.read_csv(file_name)

product_sales = df.groupby("Product")["Quantity"].sum()
```

```
# Find the product with the highest total quantity sold

best_product = product_sales.idxmax()

highest_quantity = product_sales.max()

# Display the result

print(f"Best selling product: {best_product}")

print(f"Total quantity sold: {highest_quantity}")
```
