

1.1.2. Conditional Calculation Based on the Number of Digits

06:46

Write a Python program that accepts an integer as input. Depending on the number of digits in .

Constraints:

$1 \leq \leq 999$

Input Format:

- The input consists of a single integer .

Output Format:

- If is a single-digit number, print its square.
- If is a two-digit number, print its square root (rounded to two decimal places).
- If is a three-digit number, print its cube root (rounded to two decimal places).
- Else print "Invalid".

Code:

```
num=int(input())
```

```
if num>0 and num<=9:
```

```
    result=num**2
```

```
    print(result)
```

```
elif num>=10 and num<100:
```

```
    result=num**0.5
```

```
    print(f"{result:.2f}")
```

```
elif num>=100 and num<1000:
```

```
    result=num**(1/3)
```

```
    print(f"{result:.2f}")
```

```
else:
```

```
    print("Invalid")
```
