

1.1.5. Multiplication Table

01:36

Write a Python program that takes an integer as input and prints the multiplication table for that integer from 1 to 10.

Input Format:

- The first line of input contains an integer that represents the number for which the multiplication table is to be printed.

Output Format:

- Print the multiplication table for the given number in the format:

`<number> x <multiplier> = <result>`

Note:

- The character "x" is used in the output to represent multiplication.
- Refer to the visible test-cases for more clarity.

Code:

```
n=int(input())
```

```
for i in range(1,11):
```

```
    print(f'{n} x {i} = {n*i}')
```
