

1.2.1. Pass or Fail

24:52

Write a Python program that accepts the number of courses and the marks of a student in those courses.

The grade is determined based on the aggregate percentage:

- If the aggregate percentage is greater than 75, the grade is Distinction.
- If the aggregate percentage is greater than or equal to 60 but less than 75, the grade is First Division.
- If the aggregate percentage is greater than or equal to 50 but less than 60, the grade is Second Division.
- If the aggregate percentage is greater than or equal to 40 but less than 50, the grade is Third Division.

Input Format:

- The first input will be an integer , the number of courses.
- The second input will be integers representing the marks of the student in each of the courses, separated by a space.

Output Format:

If the student passes all courses:

- Print the aggregate percentage (formatted to two decimal places).
- Print the grade based on the aggregate percentage.

If the student fails any course (marks < 40 in any course), print:

- "Fail".

Note:

- Aggregate Percentage: Average performance across all courses, calculated by summing all marks and dividing by the number of courses.

Code:

```
n=int(input())
```

```
marks = list(map(int,input().split(" ")))
```

```
if all(mark>=40 for mark in marks):
```

```
    per = sum(marks)/n
```

```
print(f"Aggregate Percentage: {per:.2f}")

if per>=75:

    print("Grade: Distinction")

elif 60<=per<75:

    print("Grade: First Division")

elif 50<=per<60:

    print("Grade: Second Division")

elif 40<=per<50:

    print("Grade: Third Division")

else:

    print("Fail")
```
