

1.2.4. Pattern - 2

01:50

Write a Python program to print a right-angled triangle pattern of numbers.

Input Format:

- The input is an integer, representing the number of rows in the pattern.

Output Format:

- The output should display the pattern of numbers separated by space, with each row containing increasing numbers starting from 1 up to the row number.

The screenshot displays a code editor interface with a sidebar on the left labeled 'Explorer'. The main area shows the results of two test cases. At the top, performance metrics are listed: Average time (0.044 s, 44.00 ms) and Maximum time (0.071 s, 71.00 ms). Below these, two green banners indicate that 2 out of 2 shown test cases passed and 2 out of 2 hidden test cases passed. The first test case, 'Test case 1' (52 ms), shows an expected output of 5 rows of numbers: 1, 1 2, 1 2 3, 1 2 3 4, and 1 2 3 4 5. The actual output matches this exactly. The second test case, 'Test case 2' (33 ms), shows an expected output of 8 rows of numbers: 1, 1 2, 1 2 3, 1 2 3 4, 1 2 3 4 5, 1 2 3 4 5 6, 1 2 3 4 5 6 7, and 1 2 3 4 5 6 7 8. The actual output also matches this exactly. Each test case section includes a 'Debug' button and a 'Test Case' icon.

Test Case	Expected output	Actual output
Test case 1 (52 ms)	5	5
	1	1
	1 2	1 2
	1 2 3	1 2 3
	1 2 3 4	1 2 3 4
	1 2 3 4 5	1 2 3 4 5
Test case 2 (33 ms)	8	8
	1	1
	1 2	1 2
	1 2 3	1 2 3
	1 2 3 4	1 2 3 4
	1 2 3 4 5	1 2 3 4 5
	1 2 3 4 5 6	1 2 3 4 5 6
	1 2 3 4 5 6 7	1 2 3 4 5 6 7
	1 2 3 4 5 6 7 8	1 2 3 4 5 6 7 8

Note:

- Refer to the displayed test cases for the sample pattern.

Code:

```
n=int(input())
```

```
for x in range(1,n+1):
```

```
    for y in range(1,x+1):
```

```
        print(f"{y}", end=" ")
```

```
    print()
```
