

2.2.1. Linear search Technique

06:01

Write a program to check whether the given element is present or not in the array of elements using linear search.

Input format:

- The first line of input contains the array of integers which are separated by space
- The last line of input contains the key element to be searched

Output format:

- If the element is found, print the index. If the element found multiple times, print the starting index
- If the element is not found, print **Not found**.

Sample Test Case:

Input:

1 2 3 4 3 5 6

3

Output:

2

Code:

```
def linear_search(arr, key):  
    for index in range(len(arr)):  
        if arr[index] == key:  
            return index  
    return -1  
  
arr = list(map(int,input().split()))  
  
key = int(input())  
  
index = linear_search(arr,key)  
  
if index != -1:  
    print(index)
```

else:

```
print("Not found")
```
