

4.2.3. City that Sold the Most Products

01:09

Write a Python program that takes the file name of a CSV file as input, reads the data, and performs the following operations:

- The CSV file contains the columns: Date, Product, Quantity, Price, and City.
- Group the data by City and calculate the total quantity of products sold for each city.
- Find the city that sold the most products (based on the total quantity sold).

Sample Data:

```
Date,Product,Quantity,Price,City
2025-01-01,Product A,5,20,New York
2025-01-01,Product B,3,15,Los Angeles
2025-01-02,Product A,7,20,New York
2025-01-02,Product C,4,30,Chicago
2025-01-03,Product B,2,15,Chicago
2025-01-03,Product A,8,20,Los Angeles
2025-01-04,Product C,6,30,New York
2025-01-04,Product B,5,15,Los Angeles
2025-01-05,Product A,3,20,Chicago
2025-01-05,Product C,10,30,Los Angeles
```

Note:

The data cannot be displayed in the file. You can refer to the sample data provided for insights.

Code:

```
import pandas as pd
```

```
# Prompt the user for the file name
```

```
file_name = input()
```

```
# Load the data
```

```
df = pd.read_csv(file_name)
```

```
city_sales = df.groupby("City")["Quantity"].sum()
```

```
# write the code..
```

```
best_city = city_sales.idxmax()
```

```
# Display the result
```

```
print(f"City sold the most products: {best_city}")
```

Average time
0.075 s
75.00 ms

Maximum time
0.149 s
149.00 ms

✓ 1 out of 1 shown test case(s) passed

✓ 2 out of 2 hidden test case(s) passed

✓ Test case 1 149 ms Debug

Expected output

Actual output

sales_data.csv

City · sold · the · most · products: · Los · Angeles

sales_data.csv

City · sold · the · most · products: · Los · Angeles
